WORK EXPERIENCE

Todo Application   Feb-2021

Build a Todo Application with React Js, Fake JSON Server with all of the CRUD operations such as create, read, update and delete.

- Designed beautiful attractive UI design for the application with bootstrap 5 modern features.
- Used Fake Json placeholder API and Localstorage to store data and the state of the data using react hooks.
- Write responsive code to display the application well on all devices, such as mobiles, tabs, and desktop 4k screens.

Leveraged Knowledge in React Javascript, Styled Components, Bootstrap 5, JSON

Task Tracker Web Application   Oct-2019

Develop a Task Tracker Web Application with React js, Vanilla Js event listeners, Material UI, JSX with create, read, update and delete functionality.

- UI designed with Material UI built-in components with animations and ripple effects.
- Store the data in Mongo DB and build API with Nodejs at the back end.
- Write responsive code to display the application well on all devices, such as mobiles, tabs, and desktop 4k screens.

Leveraged Knowledge in React Javascript, Styled Components, Material UI, JSON, and JSX

Netflix Clone   Dec-2020

Worked both as an individual designer as well as a technical developer on multiple projects related to building clones such as Netflix. Grab posters and banners and display different banners on the landing page each time page reloads.

- Utilizing TMDb API to get movie products, worked around with Axios to make Get requests to the API.
- Used modern CSS features like Grid system, FlexBox to align posters vertically and horizontally, used media queries for mobile and tab-friendly screens.

Leveraged Knowledge in JavaScript, React, JSX.

Self-Employed, Sargodha, Pakistan   Sep 2017 - Continue
